In physics, a hidden-variable theory is a deterministic model which seeks to explain the probabilistic nature of quantum mechanics by introducing additional, possibly inaccessible, variables.

The mathematical formulation of quantum mechanics assumes that the state of a system prior to measurement is indeterminate; quantitative bounds on this indeterminacy are expressed by the Heisenberg uncertainty principle. Most hidden-variable theories are attempts to avoid this indeterminacy, but possibly at the expense of requiring that nonlocal interactions be allowed. One notable hidden-variable theory is the de Broglie-Bohm theory.

In their 1935 EPR paper, Albert Einstein, Boris Podolsky, and Nathan Rosen argued that quantum entanglement might imply that quantum mechanics is an incomplete description...

A hidden Markov model (HMM) is a Markov model in which the observations are dependent on a latent (or hidden) Markov process (referred to as

Hidden Expedition is a series of single-player hidden object casual games developed by the internal studios of Big Fish Games for the first five installments (using Big Fish Games Framework as the engine, and with the help of Flood Light Games in the 5th game), and by Eipix Entertainment for all subsequent installments. The three latest

installments are developed by Domini Games. As of 2021, a total of twenty-one games in the series have been released. The Hidden Expedition series marks the second major hidden object game brand from Big Fish Games. The second game in the series, Hidden Expedition: Everest, would go on to be the first game Big Fish released on the iPhone.

Children in the Holocaust (mainly Jewish) were hidden in various ways during the Holocaust in order to save them from the Nazis. Most were hidden in Poland, though some were hidden in Western Europe. Not all attempts to save them were successful; for instance, German Jewish refugee Anne Frank was eventually captured in Amsterdam.

Hidden file and hidden directory

In computing, a hidden file or hidden directory is a file system object (such as a file or directory) that is excluded from a directory content report unless explicitly requested. The value of hiding files is generally to avoid showing the user files that are not likely to be of interest to them. The feature is not a security mechanism because access is not restricted; the user can request that normally-hidden files be displayed. Hiding is a feature of the programs that display file system objects; not inherently with either the operating or file systems.

Hidden-surface determination

In 3D computer graphics, hidden-surface determination (also known as shown-surface determination, hidden-surface removal (HSR), occlusion culling (OC)

In 3D computer graphics, hidden-surface determination (also known as shown-surface determination, hidden-surface removal (HSR), occlusion culling (OC) or visible-surface determination (VSD)) is the process of identifying what surfaces and parts of surfaces can be seen from a particular viewing angle. A hidden-surface determination algorithm is a solution to the visibility problem, which was one of the first major problems in the field of 3D computer graphics. The process of hidden-surface determination is sometimes

called hiding, and such an algorithm is sometimes called a hider. When referring to line rendering it is known as hidden-line removal. Hidden-surface determination is necessary to render a scene correctly, so that one may not view features hidden behind the model itself, allowing...

Hidden champions

order to achieve economies of scale. For this reason, hidden champions feel a strong need to work abroad early in their company's development. Hidden

Hidden champions are relatively small but highly successful companies that excel in their niche but are not well-known to the general public. The term was coined by Hermann Simon. He first used the term in 1990 as a title of a publication in a scientific German management journal, describing the small, highly specialized world-market leaders in Germany. According to his definition, a company must meet three criteria to be considered a hidden champion:

Number one, two, or three in the global market, or number one on the company's continent, determined by market share

Revenue below \$5 billion

Low level of public awareness

The Parable of the Hidden Treasure is a parable of Jesus which appears in Matthew 13:44 and illustrates the great value of the Kingdom of Heaven. It immediately precedes the parable of the pearl, which has a similar theme. The parable has been depicted by artists such as Rembrandt.

The Hidden Fortress (Japanese: 隠し砦の三悪人, Hepburn: Kakushi Toride no San Akunin; lit. 'The Three Villains of the Hidden Fortress') is a 1958 Japanese epic jidaigeki adventure film directed by Akira Kurosawa, with special effects by Eiji Tsuburaya. It tells the story of two peasants who agree to escort a man and a woman across enemy lines in return for gold without knowing that he is a general and the woman is a princess. The film stars Toshiro Mifune as General Makabe Rokurōta and Misa Uehara as Princess Yuki while the peasants, Tahei and Matashichi, are portrayed by Minoru Chiaki and Kamatari Fujiwara respectively.

The Hidden Fortress was the fourth highest-grossing film of the year in Japan, and Kurosawa's most successful film up to that point. It was a significant influence on the 1977 American...
