

Fiber Optic Reference Guide David Goff

Gap loss

Technician's Guide to Fiber Optics (4th ed.). Thomson Delmar Learning. ISBN 1-4018-1270-8. David R. Goff; Kimberly S. Hansen. Fiber Optic Reference Guide: a practical

Gap loss is a type of signal strength loss that occurs in fiber optic transmission when the signal is transferred from one section of fiber or cable to another.

The three basic types of gap loss are angular misalignment loss, lateral offset loss, and longitudinal displacement loss.

The losses tend to be proportional to the ratio of the core radius to the size of the gap or displacement. Formulas, examples and graphs can be found at Fiber Optic Communication - Couplers and Connectors

Gap loss can be reduced by filling the gap with a gel that matches the index of refraction of the fiber as closely as possible.

Garnet

used in optical isolators for laser systems, in optical circulators for fiber optic systems, in optical modulators, and in current and magnetic field sensors

Garnets () are a group of silicate minerals that have been used since the Bronze Age as gemstones and abrasives.

Garnet minerals, while sharing similar physical and crystallographic properties, exhibit a wide range of chemical compositions, defining distinct species. These species fall into two primary solid solution series: the pyrope series (pyrope, almandine, spessartine), with the general formula $[\text{Mg,Fe,Mn}]_3\text{Al}_2(\text{SiO}_4)_3$; and the ugrandite series (uvarovite, grossular, andradite), with the general formula $\text{Ca}_3[\text{Cr,Al,Fe}]_2(\text{SiO}_4)_3$. Notable varieties of grossular include hessonite and tsavorite.

market push to become a test city for Google's new super high speed fiber optic line known as GeauxFiBR.[further explanation needed] In 2015, the city

The history of the area that is now the U.S. state of Louisiana, can be traced back thousands of years to when it was occupied by indigenous peoples. The first indications of permanent settlement, ushering in the Archaic period, appear about 5,500 years ago. The area that is now Louisiana formed part of the Eastern Agricultural Complex. The Marksville culture emerged about 2,000 years ago out of the earlier Tchefuncte culture. It is considered ancestral to the Natchez and Taensa peoples. Around the year 800 CE, the Mississippian culture emerged from the Woodland period. The emergence of the Southeastern Ceremonial Complex coincides with the adoption of maize agriculture and chiefdom-level complex social organization beginning in circa 1200 CE. The Mississippian culture mostly disappeared around...

List of nominees for the Nobel Prize in Physiology or Medicine

of single nerve fibers and muscle fibers and demonstration of the existence of reflex excitatory fibers and reflex inhibitory fibers" "Treatment of thyrotoxicosis

The Nobel Prize in Physiology or Medicine (Swedish: Nobelpriset i fysiologi eller medicin) is awarded annually by the Nobel Assembly at the Karolinska Institute to scientists who have made outstanding contributions in Biology. It is one of the five Nobel Prizes which were established by the will of Alfred Nobel in 1895.

Every year, the Nobel Committee for Physiology or Medicine sends out forms, which amount to a personal and exclusive invitation, to about three thousand selected individuals to invite them to submit nominations. The names of the nominees are never publicly announced, and neither are they told that they have been considered for the Prize. Nomination records are strictly sealed for fifty years. However, the nominations for the years 1901 to 1953 are publicly available yet. Despite...
