*9810J-1000J=8810J this is $\frac{1}{2}mv^2$ Solving for v $v^2=2E/m=2*8810/100=176.2$ We get displacement of 50m $v=\sim 13.3m/s$ I enjoy kinematics.

== Greatest Common Factor / Least Common Multiple Problem ==

I recently went to a math competition and this problem is bugging the heck out of me. Can anyone show how to solve it as well as provide the useful laws?

Q) A positive integer 'n' has the property that the least common multiple of n and 36 is 500 greater than the greatest common factor of n and 36. What is 'n'? Written mathematically: $LCM(36,n) - 500 = GCF(36,n)$... $n=?$

== Earliest Fossil Egg ==

Where was the earliest fossil egg found?

-anon

As yet, we do not have an article on Fossil eggs nor does our fossil article provide much detail. However, these articles by The San Francisco Chronicle on dinosaur fossil eggs [1] and the National Geographic on bird fossil eggs [2] should be of some assistance to you. I have added Fossil eggs to Wikipedia:Requested Articles so that someone can write an article on this topic. Capitalistroadster 00:08, 23 September 2005 (UTC)

== Origin of the universe ==

The question of the origin of the matter in the universe is no longer thought to be beyond the range of science ... everything can be created from nothing ... it is fair to say that the universe is the ultimate free lunch. — Alan Guth, *The Inflationary Universe: The Quest for a New Theory of Cosmic Origins*

is he right?, can something be created from nothing? I don't get how.....--Cosmic girl 01:50, 1 January 2006 (UTC)
