Volkswagen Passat (B3)

Funktion (135)" (PDF). V.A.G. Service. Retrieved 2014-01-08. "1992 Passat B3 wiring harness for electronically regulated air conditioner". VW ETKA. Retrieved

The third-generation Volkswagen Passat, known as Volkswagen Passat B3 or Volkswagen Passat 35i, is a large family car which was produced by German manufacturer Volkswagen from 1988 to 1993. It

was introduced in March 1988 in Europe, 1989 in North America, and 1995 in South America; it was also briefly available in Australia in 1991, when a total of 14 Passat GL 16V in sedan and wagon versions were sold by then importer TKM. Unlike the previous two generations of the Passat, the B3 was not available as a fastback - only 4-door sedan and 5-door station wagon versions were available, setting the precedent for the model for all subsequent generations to date. Its curvy looks were a contrast from the boxy appearance of its predecessor and owed much to the "jelly mould" style pioneered by Ford...

Toyota concept vehicles (1980–1989)

advance electronics such as electronic engine and drive train management, colour monitors and fibre optic wiring. The Toyota SV-2 was a concept vehicle

Toyota Concept Vehicles produced between 1980 and 1989 include:

Artemis I

material. Other savings would be due to revising its various components and wiring. For Artemis I, the Orion spacecraft was to be outfitted with a complete

Artemis I, formerly Exploration Mission-1 (EM-1), was an uncrewed Moon-orbiting mission that was launched in November 2022. As the first major spaceflight of NASA's Artemis program, Artemis I marked the agency's return to lunar exploration after the conclusion of the Apollo program five decades earlier. It was the first integrated flight test of the Orion spacecraft and Space Launch System (SLS) rocket, and its main objective was to test the Orion spacecraft, especially its heat shield, in preparation for subsequent Artemis missions. These missions seek to reestablish a human presence on the Moon and demonstrate technologies and business approaches needed for future scientific studies, including exploration of Mars.

The Orion spacecraft for Artemis I was stacked on October 20, 2021, and on...

American Motors Corporation

American Motors subsidiary in Coleman, Wisconsin. Manufactured automotive wiring harnesses for American Motors and other automakers. Evert Products Co. -

American Motors Corporation (AMC; commonly referred to as American Motors) was an American automobile manufacturing company formed by the merger of Nash-Kelvinator Corporation and Hudson Motor Car Company on May 1, 1954. At the time, it was the largest corporate merger in U.S. history.

American Motors' most similar competitors were those automakers that held similar annual sales levels, such as Studebaker, Packard, Kaiser Motors, and Willys-Overland. Their largest competitors were the Big Three—Ford, General Motors, and Chrysler.

2e Engine Wiring

American Motors' production line included small cars—the Rambler American, which began as the Nash Rambler in 1950, Hornet, Gremlin, and Pacer; intermediate and full-sized cars, including the Ambassador, Rambler Classic, Rebel, and Matador; muscle cars, including the...

Grissom Air Reserve Base

large diesel powered permanent type generator with overhead distribution wiring, and several portable gasoline powered generators produced the electricity

Grissom Air Reserve Base is a United States Air Force base, located about 12 miles (19 km) north of Kokomo in Cass and Miami counties in Indiana. The facility was established as a U.S. Navy installation, Naval Air Station Bunker Hill, in 1942 and was an active Air Force installation, Bunker Hill Air Force Base from 1954 to 1968, and Grissom Air Force Base from 1968 to 1994. Pursuant to a BRAC 1991 decision, the installation was downsized to an Air Force Reserve installation and renamed Grissom Air Reserve Base.

Since then it has been a joint-use civil airport/military base. Approximately 1700 acres plus the runway and taxiways comprise the current military installation, with the Grissom Aeroplex comprising the civilian aviation activities providing general aviation and charter service.

Galvanic anode

obtained more cheaply than by galvanic anodes. Where large arrays are used, wiring is needed due to high current flow and need to keep resistance losses low

2e Engine Wiring

A galvanic anode, or sacrificial anode, is the main component of a galvanic cathodic protection system used to protect buried or submerged metal structures from corrosion.

They are made from a metal alloy with a more "active" voltage (more negative reduction potential / more positive oxidation potential) than the metal of the structure. The difference in potential between the two metals means that the galvanic anode corrodes, in effect being "sacrificed" in order to protect the structure.

Supercomputing in China

researchers attributed this performance to improvements in chip fabrication and wiring configuration. The Supercomputing Center of the China Academy of Sciences

Since the early 2000s, China has increased its presence in the TOP500 rankings of supercomputers, with systems like Tianhe-1A reaching the top position in 2010 and Sunway TaihuLight leading in 2016.

By 2018, China had the highest number of supercomputers listed on the TOP500, reflecting its commitment to advancing computational capabilities across various sectors, including scientific research, industrial applications, and national defense. However, this progress has been met with challenges, notably from U.S. sanctions aimed at curbing China's access to advanced computing technologies. Since 2019, after the U.S. began levying sanctions on several Chinese companies involved with supercomputing, public information on the state of supercomputing in China had become less available.

List of spaceflight-related accidents and incidents

China's spaceflight history. NewScientist. 12 October 2005. "Long March 2E | Apstar 2". nextspaceflight.com. Retrieved 2025-03-03. Select Committee of

2e Engine Wiring

This article lists verifiable spaceflight-related accidents and incidents resulting in human death or serious injury. These include incidents during flight or training for crewed space missions and testing, assembly, preparation, or flight of crewed and robotic spacecraft. Not included are accidents or incidents associated with intercontinental ballistic missile (ICBM) tests, death or injury to test animals, uncrewed space flights, rocket-powered aircraft projects of World War II, or conspiracy theories about alleged unreported Soviet space accidents.

As of January 2025, 19 people have died during spaceflights that crossed, or were intended to cross, the boundary of space as defined by the United States (50 miles above sea level). Astronauts have also died while training for space missions...

List of accidents and incidents involving military aircraft (1960–1969)

catches fire with fatalities to four of 11 on board. 11 February A Lockheed SP-2E Neptune, BuNo 131487, of a Navy Reserve unit based in Minneapolis, Minnesota

The accidents and incidents listed here are grouped by the year in which they occurred. Not all of the aircraft were in operation at the time. For more exhaustive lists, see the Aircraft Crash Record Office, the Air Safety Network, or the Dutch Scramble Website Brush and Dustpan Database. Combat losses are not included, except for a very few cases denoted by singular circumstances.

Prichal (ISS module)

compressed helium to check the hatches for leaks. Once testing was complete, the wiring was installed, and Prichal was returned to the vacuum for its pneumatic

Prichal (Russian: Причал, lit. 'pier'), also known as the Uzlovoy Module (UM, Russian: узловой модуль, romanized: Uzlovoy Modul', lit. 'Node Module') is a Russian-built component of the International Space Station (ISS). This spherical module has six

2e Engine Wiring

docking ports (forward, aft, port, starboard, zenith, and nadir) to provide additional docking ports for Soyuz and Progress spacecraft, as well as potential future modules.

Prichal was launched on 24 November 2021, at 13:06:35 UTC, atop a Soyuz-2.1b rocket and guided autonomously into the nadir port of the Nauka module by a Progress M-UM spacecraft attached to the Prichal's nadir port. Once in place, the Progress spacecraft disconnected for a destructive reentry. As of 2024, the forward, aft, port and starboard docking ports remain covered.

Prichal...
