

Oracle Application Express Administration For Dbas And Developers

Synonym (database)

Expert Oracle Database 10g Administration. Apress. ISBN 978-1-59059-451-3. Bobrowski, Steve. Hands-on Oracle Database 10g Express Edition for Windows

In databases, a synonym is an alias or alternate name for a table, view, sequence, or other schema object. They are used mainly to make it intuitive for users to access database objects owned by other users. They also hide the underlying object's identity and make it harder for a malicious program or user to target the underlying object (security through obscurity). Because a synonym is just an alternate name for an object, it requires no storage other than its definition. When an application uses a synonym, the DBMS forwards the request to the synonym's underlying base object. By coding your programs to use synonyms instead of database object names, you insulate yourself from any changes in the name, ownership, or object locations, at the cost of adding another layer that also needs to be maintained. Users can also have different needs, for example some may wish to use a shorter name to refer to database objects they often query, which can be done with aliases without having to rename the underlying object and alter the code referring to it.

Synonyms are very powerful from the point of view of allowing users access to objects that do not lie within their schema. All synonyms have to...

SQL Plus

of Oracle SQL Developer SQL Workshop (part of Oracle Application Express) Starting from Oracle database 11g, iSqlplus (web based) and sqlplus GUI no

SQL Plus is the most basic Oracle Database utility, with a basic command-line interface, commonly used by users, administrators, and programmers.

== Command types ==

SQL Plus understands five categories of text:

List of SQL software and tools

Microsoft SQL Server Express Mimer SQL MonetDB mSQL MySQL Netezza NexusDB NonStop SQL NuoDB OpenLink Virtuoso Oracle database Oracle Rdb Panorama Paradox

This is a list of software and programming tools for the SQL language, including RDBMSs, database clients, IDEs, Database administration tools, migration tools, and related projects.

Entity-attribute-value model

"Oracle Health Sciences Clintrial

Oracle". www.oracle.com. "Oracle Clinical - Overview - Oracle". www.oracle.com. "Relationally Divided - An entity-attribute-value model (EAV) is a data model optimized for the space-efficient storage of sparse—or ad-hoc—property or data values, intended for situations where runtime usage patterns are arbitrary, subject to user variation, or otherwise unforeseeable using a fixed design. The use-case targets applications which offer a large or rich system of defined property types, which are in turn appropriate to a wide set of entities, but where typically only a small, specific selection of these are instantiated (or persisted) for a given entity. Therefore, this type of data model relates to the mathematical notion of a sparse matrix.

EAV is also known as object-attribute-value model, vertical database model, and open schema.

== Data structure ==

This data representation is analogous to space-efficient methods of storing a sparse matrix, where only non-empty values are stored. In an EAV data model, each attribute-value pair is a fact describing an entity, and a row in an EAV table stores a single fact. EAV tables are often described as "long and skinny": "long" refers to the number of rows, "skinny" to the few columns.

Data is recorded as three columns:

List of Philippine laws

THE LAWS RELATIVE TO LAND TRANSPORTATION AND TRAFFIC RULES, TO CREATE A LAND TRANSPORTATION COMMISSION AND FOR OTHER PURPOSES" Philippines' Official

migration programmes involving hyperconverged virtual infrastructure, Oracle appliances, AIX and such. I have worked with Retrospect, BackupExec, NetBackup, Tivoli

== User:Vane323 ==

Since 9 October, I began to undo the editions of the user Vane323 in the article Lo que la vida me robó. Since then, it has initiated a long dispute over the content Vane323 is adding. Although I have reverted several times, and I leave messages in his discussion, the user does not respond to the messages and uses the edit summary to talk with me. I already asked him to stop adding irrelevant information about who killed some characters, but he doesn't stop.-- Bradford ☒ 16:04, 11 October 2019 (UTC)

Comment: note Special:Diff/920767127 and Special:Diff/920767239 popped up in recent change patrolling (first one handled by Jebcubed, second one handled by myself), so it might be worth keeping an eye on this thread. Thanks, SITH (talk) 18:47, 11 October 2019 (UTC)

== Repeated fair use violations ==

TechnicianGB (talk · contribs)

Inactive user 20171 (talk · contribs)

This is a result of Wikipedia:Files for discussion/2017 March 29#File:Official Köppen climate classification of Spain made by AEMET.png and is a culmination of many many attempts to get full and valid fair use rationales for every attempted use of the image here: File:Official Köppen climate classification of Spain made by AEMET.png

I have attempted numerous times to explain to both the above editors how fair use works and that the burden of creating fair use rationales is on the one that wants to place the image on specific articles. I thought I was getting somewhere, but apparently there is either some break down in communication or wanton disregard of our policy on the use of copyrighted images. Frankly, I've had enough. These two editors have now tried numerous times to insert this image into articles without filling out fair use rationales against policy. This is considered a copyright violation. The latest addition to Iberian Peninsula was the final straw and after giving a final warning to Inactive user, TechnicianGB went and reinserted the image again without any attempt...
