The 2009 Solo and Small Firm Legal Technology Guide

The Concurrent Engineering (CE) approach was developed in the 1980s, based on the concept that different phases of a product life cycle should be conducted concurrently and initiated as early as possible within the Product Creation Process (PCP). CE concepts have matured and become the foundation of many new ideas, methodologies, initiatives, approaches and tools. This book contains the proceedings from the 23rd ISPE Inc. International Conference on Transdisciplinary (formerly: Concurrent) Engineering, held in Curitiba, Parana, Brazil, in October 2016. The conference, entitled 'Transdisciplinary Engineering: Crossing Boundaries', provides an important forum for international scientific exchange on Concurrent Engineering and collaborative enterprises, and attracts the participation of researchers, industry experts and students, as well as government representatives. The 108 peer reviewed papers and keynote speech included here, range from theoretical and conceptual to strongly pragmatic works, which are organized into 17 sections including: Concurrent Engineering and knowledge exchange; engineering for sustainability; multidisciplinary project management; collaborative design and engineering; optimization of engineering operations and data analytics; and multidisciplinary design optimization, among others. The book gives an overview of the latest research, advancements and applications in the field and will be of interest to researchers, design practitioners and educators.

The 2010 Solo and Small Firm Legal Technology Guide

This book provides a ‘no-nonsense’ guide to project management which will enable library and information professionals to lead or take part in a wide range of projects from large-scale multi-organization complex projects through to relatively simple local ones. Barbara Allan has fully revised and updated her classic 2004 title, Project Management, to incorporate considerable developments during the past decade, including: the development and wide-scale acceptance of formal project management methodologies; the use of social media to communicate and disseminate information about projects and the large shift in the types of project library and information workers may be involved in. The text is supported by practical case studies drawn from a wide range of LIS organizations at local, regional, national and international levels. These examples provide an insight into good practice for the practitioner, from an individual working in a voluntary organization on an extremely limited budget, to someone involved in an international project. Content covered includes: an introduction to project management, project workers and the library and information professiondifferent approaches to project management, the project cycle, the people side of projects and management of changediscussion of project methodologies, project management software, open source software, collaborative working software and use of social mediaproject initiation, communication, analysis and project briefsdeveloping project infra-structure, scheduling, working out the finances and carrying out a detailed risk analysisworking in partnerships, in diverse and virtual teams, and managing change. If you are an LIS professional involved in project work of any kind, whether on a managerial, practical, academic or research level, this is an invaluable resource for you.

Mountain of Black Glass

In this completely updated and revised edition of Designing with the Mind in Mind, Jeff Johnson provides you with just enough background in perceptual and cognitive psychology that user interface (UI) design guidelines make intuitive sense rather than being just a list of rules to follow. Early UI practitioners were trained in cognitive psychology, and developed UI design rules based on it. But as the field has evolved since the first edition of this book, designers enter the field from many disciplines. Practitioners today have enough experience in UI design that they have been exposed to design rules, but it is essential that they understand the psychology behind the rules in order to effectively apply them. In this new edition, you'll find new chapters on human choice and decision making, hand-eye coordination and attention, as well as new examples, figures, and explanations throughout. Provides an essential source for user interface design rules and how, when, and why to apply them Arms designers with the science behind each design rule, allowing them to make informed decisions in projects, and to explain those decisions to others Equips readers with the knowledge to make educated tradeoffs between competing rules, project deadlines, and budget pressures Completely updated and revised, including additional coverage on human choice and decision making, hand-eye coordination and attention, and new mobile and touch-screen examples throughout

The volume of new municipal bond issues has increased dramatically over the past thirty years. This new book by Alan Steiss provides an essential and comprehensive guide to the various new fiduciary and fiscal instruments used in the capital budgeting and finance process in the public sector. Steiss convincingly argues that capital budgeting and debt administration, when pursued from a strategic planning perspective as opposed to the more conventional cost-based framework, provides a forward-looking alternative based on a jurisdiction's needs, its resource base, and growth potential. Strategic Facilities Planning illustrates how the allocation of fiscal resources to acquire or construct and maintain strategic facilities can serve as a primary instrument for the effectuation of long-range public policy objectives. This book will serve as an important reference or course text for students and a guide for practitioners in public and business administration and urban planning.
