Industrial robot

various machines are ’integrated’ and controlled by a single computer or PLC. How the robot interacts with other machines in the cell must be programmed

An industrial robot is a robot system used for manufacturing. Industrial robots are automated, programmable and capable of movement on three or more axes.

Typical applications of robots include welding, painting, assembly, disassembly, pick and place for printed circuit boards, packaging and labeling, palletizing, product inspection, and testing; all accomplished with high endurance, speed, and precision. They can assist in material handling.

In the year 2023, an estimated 4,281,585 industrial robots were in operation worldwide according to International Federation of Robotics (IFR).

Transfer pricing

the state of California in the U.S. Supreme Court case of Barclays Bank PLC v. Franchise Tax Board, the formulary apportionment method, which is also

Transfer pricing refers to the rules and methods for pricing transactions within and between enterprises under common ownership or control. Because of the potential for cross-border controlled transactions to distort taxable income, tax authorities in many countries can adjust intragroup transfer prices that differ from what would have been charged by unrelated enterprises dealing at arm’s length (the arm’s-length principle). The OECD and World Bank recommend intragroup pricing rules based on the arm’s-length principle, and 19 of the 20 members of the G20 have adopted similar measures through bilateral treaties and domestic legislation, regulations, or administrative practice. Countries with transfer pricing legislation generally follow the OECD Transfer Pricing Guidelines for Multinational...
